МИНОБРНАУКИ РОССИИ САНКТ-ПЕТЕРБУРГСКИЙ ГОСУДАРСТВЕННЫЙ ЭЛЕКТРОТЕХНИЧЕСКИЙ УНИВЕРСИТЕТ «ЛЭТИ» ИМ. В.И. УЛЬЯНОВА (ЛЕНИНА) Кафедра МО ЭВМ

ОТЧЕТ

по лабораторной работе №2

по дисциплине «Организация ЭВМ и систем»

Тема: Изучение режимов адресации и формирования исполнительного адреса.

Студент гр. 0383	Сергевнин Д.В.
Преподаватель	Ефремов М.А.

Санкт-Петербург

Цель работы.

Лабораторная работа 2 предназначена для изучения режимов адресации, использует готовую программу lr2 comp.asm на Ассемблере, которая в выполняться не автоматическом режиме должна, так как не имеет самостоятельного функционального назначения, а только тестирует режимы адресации. Поэтому ее выполнение должно производиться под управлением отладчика в пошаговом режиме. В программу введен ряд ошибок, которые необходимо объяснить в отчете по работе, а соответствующие команды прохождения трансляции. Необходимо составить закомментировать ДЛЯ протокол выполнения программы в пошаговом режиме отладчика по типу таблицы 1 предыдущей лабораторной работы и подписать его у преподавателя. На защите студенты должны уметь объяснить результат выполнения каждой команды с учетом используемого вида адресации. Результаты, полученные с помощью отладчика, не являются объяснением, а только должны подтверждать ваши объяснения.

Порядок выполнения работы.

- 1. Получить у преподавателя вариант набора значений исходных данных (массивов) vec1, vec2 и matr из файла lr2.dat, приведенного в каталоге Задания и занести свои данные вместо значений, указанных в приведенной ниже программе.
- 2. Протранслировать программу с созданием файла диагностических сообщений; объяснить обнаруженные ошибки и закомментировать соответствующие операторы в тексте программы.
- 3. Снова протранслировать программу и скомпоновать загрузочный модуль.
- 4. Выполнить программу в пошаговом режиме под управлением отладчика с фиксацией содержимого используемых регистров и ячеек памяти до и после выполнения команды. 6

5. Результаты прогона программы под управлением отладчика должны быть подписаны преподавателем и представлены в отчете.

Вариант 4:

vec1 DB 12,11,10,9,5,6,7,8

vec2 DB -40,-50,40,50,-20,-30,20,30

matr DB 5,6,7,8,-8,-7,-6,-5,1,2,3,4,-4,-3,-2,-1

Выполнение работы.

При трансляции программы были обнаружены ошибки:

- mov mem3,[bx] lr2.asm(46): error A2052: Improper operand type Попытка положить данные из одной ячейки памяти в другую, что недопустимо. Перемещать данные можно только между регистрами или между регистрами и ячейками памяти.
- mov cx,vec2[di] lr2.asm(53): warning A4031: Operand types must match
 - Попытка положить данные из ячейки памяти размером 1 байт в регистр размером 2 байт. Размеры операндов не совпадают.
- mov cx,matr[bx][di] lr2.asm(57): warning A4031: Operand types must match
 - Попытка положить данные из ячейки памяти размером 1 байт в регистр размером 2 байт. Размеры операндов не совпадают.
- mov ax,matr[bx*4][di] lr2.asm(58): error A2055: Illegal register value
 Недопустимое значение регистра
- mov ax,matr[bp+bx] lr2.asm(78): error A2046: Multiple base registers Попытка использовать несколько базовых регистров для адресации, что недопустимо.
- mov ax,matr[bp+di+si] lr2.asm(79): error A2047: Multiple index registers

Попытка использовать несколько индексных регистров для адресации, что недопустимо.

Начальное содержимое сегментных регистров: (CS) = 1A0A, (DS) = 19F5, (ES) = 19F5, (SS) = 1A05

Строки, содержащие ошибки, были закомментированы в файле lr2 fixed.asm.

Таблица 1. Протокол выполнения программы lr2_fix.asm

Тексты исходных файлов программ см. в приложении А.

Тексты файлов диагностических сообщений см. в приложении Б.

Выводы.

В ходе выполнения данной лабораторной работы была изучена работа с режимами адресации на языке Ассемблер.
