МИНОБРНАУКИ РОССИИ САНКТ-ПЕТЕРБУРГСКИЙ ГОСУДАРСТВЕННЫЙ ЭЛЕКТРОТЕХНИЧЕСКИЙ УНИВЕРСИТЕТ «ЛЭТИ» ИМ. В.И. УЛЬЯНОВА (ЛЕНИНА) Кафедра МО ЭВМ

ОТЧЕТ

по лабораторной работе №2

по дисциплине «Организация ЭВМ и систем»

Тема: Изучение режимов адресации и формирования исполнительного адреса.

Студент гр. 0383	Сергевнин Д.В.
Преподаватель	 Ефремов М.А.

Санкт-Петербург

Цель работы.

Лабораторная работа 2 предназначена для изучения режимов адресации, использует готовую программу lr2 comp.asm на Ассемблере, автоматическом режиме выполняться не должна, так как не имеет самостоятельного функционального назначения, а только тестирует режимы адресации. Поэтому ее выполнение должно производиться под управлением отладчика в пошаговом режиме. В программу введен ряд ошибок, которые необходимо объяснить в отчете по работе, а соответствующие команды закомментировать ДЛЯ прохождения трансляции. Необходимо составить протокол выполнения программы в пошаговом режиме отладчика по типу таблицы 1 предыдущей лабораторной работы и подписать его у преподавателя. На защите студенты должны уметь объяснить результат выполнения каждой команды с учетом используемого вида адресации. Результаты, полученные с помощью отладчика, не являются объяснением, а только должны подтверждать ваши объяснения.

Порядок выполнения работы.

- 1. Получить у преподавателя вариант набора значений исходных данных (массивов) vec1, vec2 и matr из файла lr2.dat, приведенного в каталоге Задания и занести свои данные вместо значений, указанных в приведенной ниже программе.
- 2. Протранслировать программу с созданием файла диагностических сообщений; объяснить обнаруженные ошибки и закомментировать соответствующие операторы в тексте программы.
- 3. Снова протранслировать программу и скомпоновать загрузочный модуль.
- 4. Выполнить программу в пошаговом режиме под управлением отладчика с фиксацией содержимого используемых регистров и ячеек памяти до и после выполнения команды. 6

5. Результаты прогона программы под управлением отладчика должны быть подписаны преподавателем и представлены в отчете. Пример используемой программы приведен ниже.

Вариант 4:

```
vec1 DB 12,11,10,9,5,6,7,8
vec2 DB -40,-50,40,50,-20,-30,20,30
matr DB 5,6,7,8,-8,-7,-6,-5,1,2,3,4,-4,-3,-2,-1
```

Ход работы.

- 1) При трансляции программы обнаружены следующие ошибки:
 - 1. mov mem3,[bx] error A2052: Improper operand type инструкция mov неспособна перенести значение из одной ячейки памяти в другую. (для этого есть инструкция movs или можно использовать промежуточное значение)
 - 2. mov cx,vec2[di] warning A4031: Operand types must match попытка положить данные из ячейки памяти с размером 1 байт в регистр с размером 2 байта.
 - 3. mov cx,matr[bx][di] warning A4031: Operand types must match попытка положить данные из ячейки памяти с размером 1 байт в регистр с размером 2 байта.
 - 4. mov ax,matr[bx*4][di] error A2055: Illegal register value недопустимое значение регистра.
 - 5. mov ax,matr[bp+bx] error A2046: Multiple base registers недопустимо использовать несколько базовых регистров для адресации.

6. mov ax,matr[bp+di+si] – error 2047: Multiple index registers – недопустимо использовать несколько индексных регистров для адресации.

Строки, содержащие ошибки были закомментированы в файле LR2_FIX.asm

2) Запуск lr2_fix.asm под отладчиком:

Начальное содержимое сегментных регистров:

$$(CS) = 1A0A$$

$$(DS) = 19F5$$

$$(ES) = 19F5$$

$$(SS) = 1A05$$

		Программа не
		завершается

Компоненты программы см. в приложении Б.

Выводы.

В ходе выполнения работы были изучены способы взаимодействия с массивами, режимы адресации и формирования исполнительного адреса
